Shubham Kataria

Graduate Software Engineer | Backend and Full-Stack | Java, Python, React

Auckland, New Zealand | +64 22 063 2005 | katariashubham0101@gmail.com | shubhamkataria.com | github.com/shubhamkataria2005 | linkedin.com/in/shubham-kataria-2005-

PROFESSIONAL SUMMARY

Final-year Bachelor of Information Technology student at Otago Polytechnic Auckland (expected graduation December 2026). Intern at AI Sentinels building Python and FastAPI backend services, and sole developer on the codebase of ServiceCrown, a live SaaS for NZ trade businesses built with Java, Spring Boot, PostgreSQL, React and AWS. Seeking graduate backend and full-stack roles.

EDUCATION

Bachelor of Information Technology

Otago Polytechnic Auckland | Auckland, New Zealand | 2024 – Expected December 2026

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL

Backend: Spring Boot, Spring Security (JWT), FastAPI, Pydantic, REST APIs, WebSocket (STOMP)

Frontend: React, Vite, HTML, CSS

Databases: PostgreSQL, Flyway migrations

Cloud and DevOps: AWS (Elastic Beanstalk, RDS, S3, CloudFront), GitHub Actions, Git

Testing: JUnit, Mockito, Testcontainers, pytest, React Testing Library

APIs and integrations: Stripe, Xero API, OpenAI API

Familiar (smaller projects): Flask, scikit-learn, TensorFlow/Keras, Docker, Azure App Service

EXPERIENCE

Full Stack Software Engineer Intern

AI Sentinels | Auckland, New Zealand (remote) | Aug 2026 – Present

- Develop backend features in Python and FastAPI, building REST API endpoints with typed Pydantic request and response models, input validation and clear error handling.
- Integrate AI model APIs and PostgreSQL data access into backend services, with a focus on correctness and reliable failure handling.
- Write automated pytest tests, including regression tests, and investigate and fix backend performance and reliability issues.
- Deliver changes through pull requests and code review as part of a remote engineering team.

Customer Service Representative (part-time)

Z Energy | Auckland, New Zealand | Feb 2024 – Present

- Customer service, transactions and end-of-day cash reconciliation, alongside full-time study.

SELECTED ENGINEERING PROJECTS

ServiceCrown — Field Service Management SaaS

servicecrown.co.nz | Mar 2026 – Present | Sole developer on the codebase

Live SaaS for NZ trades, operated by SERVICECROWN LIMITED, a registered New Zealand company.

- Built a job-management platform covering customers, scheduling, quotes, GST invoices, online payments, technician timesheets, job costing and reporting.

- Developed the Java 17 and Spring Boot 3.5 REST API on PostgreSQL, with a Flyway-owned schema (Hibernate validate-only), and a React 19 and Vite front end installable as a PWA.
- Enforced tenant isolation by scoping data access to the signed-in business, with dedicated tests proving access across businesses is refused, including through the API and the Xero integration.
- Made Stripe payments retry-safe: webhook signatures are verified, duplicate and replayed events are ignored, and payment requests carry idempotency keys. Xero receives invoices as one-way drafts.
- Added an OpenAI tool-calling assistant in which actions such as scheduling a job or sending an invoice require user confirmation and are recorded in an audit log.
- Deployed on AWS Elastic Beanstalk, RDS, S3 and CloudFront through GitHub Actions: 200+ backend test classes (JUnit, Mockito, Testcontainers) and 100+ front-end test files gate manually approved releases, with migration review and a database snapshot before schema changes.

AI Car Dealership Platform

github.com/shubhamkataria2005/aicar_dealership_backend | Mar – Jul 2026

- Built a car marketplace combining private listings with dealership inventory: a Spring Boot REST API with Spring Security and JWT role-based access, real-time WebSocket (STOMP) messaging, test-drive bookings, a simulated checkout (mock payment mode; no real payments) and a React 19 front end.
- Integrated an OpenAI chatbot with Pinecone RAG, a scikit-learn Random Forest trade-in model and a TensorFlow/Keras CNN image classifier, served as Flask APIs on Hugging Face Spaces.
- Ran on AWS (Elastic Beanstalk, S3 and CloudFront) in June–July 2026 before moving to Render.

First Step Renovations — Business Website

firststeprenovations.co.nz | 2026

- Built and launched a React and Vite marketing site on Netlify for a Palmerston North renovation company: Web3Forms enquiry form with spam protection, LocalBusiness structured data and sitemap generated at build time, canonical 301 redirects and WCAG AA colour contrast.

Bhavishya Oil — Storefront and Ordering Platform

github.com/shubhamkataria2005/bhavishya_spring_backend | 2026

- Built a React storefront and Spring Boot backend for an Indian mustard-oil brand (orders, distributor enquiries, JWT-secured admin dashboard); containerised it with Docker and deployed it to Azure App Service via GitHub Actions, later moving it to Render.

CERTIFICATIONS AND TRAINING

AWS Academy Graduate — Cloud Foundations (training badge)

AWS Academy | December 2025 | credly.com/badges/138dcb38-25b3-41b9-9942-fefa6396c47a

Machine Learning A-Z: AI, Python & R + ChatGPT Prize [2025] (course certificate, 43 hours)

Udemy | November 2025 | Certificate UC-434598af-1700-443a-b661-c25bc5043b5b
