Shubham Kataria

Full-Stack Software Engineer | Java, Spring Boot, React, AWS

Auckland, New Zealand | +64 22 063 2005 | katariashubham0101@gmail.com | shubhamkataria.com | github.com/shubhamkataria2005 | linkedin.com/in/shubham-kataria-2005-

PROFESSIONAL SUMMARY

Final-year Bachelor of Information Technology student at Otago Polytechnic Auckland (expected graduation December 2026) with hands-on experience building full-stack applications and production SaaS. Sole developer on the codebase of ServiceCrown, a live field-service SaaS for NZ trade businesses built with Java, Spring Boot, PostgreSQL, React and AWS. Seeking graduate or junior backend and full-stack roles.

EDUCATION

Bachelor of Information Technology

Otago Polytechnic Auckland | Auckland, New Zealand | Expected graduation: December 2026

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Backend: Spring Boot, Spring Security (JWT), REST APIs, WebSocket (STOMP)

Frontend: React, Vite, HTML, CSS

Databases: PostgreSQL, Flyway migrations

Cloud and DevOps: AWS (Elastic Beanstalk, RDS, S3, CloudFront), GitHub Actions, Git

Testing: JUnit, Mockito, Testcontainers, React Testing Library

APIs and integrations: Stripe, Xero API, OpenAI API

Familiar (smaller projects): Python (Flask), scikit-learn, TensorFlow/Keras, Docker, Azure App Service

EXPERIENCE

Full Stack Software Engineer Intern

AI Sentinels | Auckland, New Zealand (remote) | Aug 2026 – Present

Customer Service Representative (part-time)

Z Energy | Auckland, New Zealand | Feb 2024 – Present

- Serve customers, process transactions and complete end-of-day cash reconciliation at a busy retail site, alongside full-time study.

SELECTED ENGINEERING PROJECTS

ServiceCrown — Field Service Management SaaS

servicecrown.co.nz | Mar 2026 – Present | Sole developer on the codebase

Live SaaS for New Zealand trade businesses, operated by SERVICECROWN LIMITED, a registered New Zealand company.

- Built a job-management platform covering customers, scheduling, quotes, GST invoices, online payments, technician timesheets, job costing and reporting.
- Developed the Java 17 and Spring Boot 3.5 REST API on PostgreSQL, with a Flyway-owned schema (Hibernate validate-only), and a React 19 and Vite front end installable as a PWA.
- Enforced tenant isolation by scoping data access to the signed-in business, with dedicated tests proving access across businesses is refused, including through the API and the Xero integration.

- Made Stripe payments retry-safe: webhook signatures are verified, duplicate and replayed events are ignored, and payment requests carry idempotency keys. Xero receives invoices as one-way drafts.
- Added an OpenAI tool-calling assistant in which actions such as scheduling a job or sending an invoice require user confirmation and are recorded in an audit log.
- Deployed on AWS Elastic Beanstalk, RDS, S3 and CloudFront through GitHub Actions: 200+ backend test classes (JUnit, Mockito, Testcontainers) and 100+ front-end test files gate manually approved releases, with migration review and a database snapshot before schema changes.

AI Car Dealership Platform

github.com/shubhamkataria2005/aicar_dealership_backend | Mar – Jul 2026

- Built a car marketplace combining private listings with dealership inventory: a Spring Boot REST API secured with Spring Security and JWT role-based access (customer, sales, admin and super admin), and a React 19 front end.
- Implemented real-time buyer–seller messaging over WebSocket (STOMP), test-drive and service bookings, and a simulated checkout (mock payment mode; no real payments are processed).
- Integrated an OpenAI GPT-4o-mini chatbot with Pinecone retrieval (RAG), a TensorFlow/Keras CNN image classifier and a scikit-learn Random Forest trade-in valuation model, served as Python Flask APIs on Hugging Face Spaces.
- Deployed to AWS (Elastic Beanstalk, S3 and CloudFront) in June–July 2026, then migrated hosting to Render.

First Step Renovations — Business Website

firststeprenovations.co.nz | 2026

- Built and launched a React and Vite marketing site on Netlify for a Palmerston North renovation company, with a Web3Forms enquiry form (validation, error states and honeypot spam protection).
- Generated LocalBusiness structured data, sitemap, robots.txt and Open Graph tags at build time from one content file; set up the .co.nz domain with canonical 301 redirects and checked colour contrast against WCAG AA.

Bhavishya Oil — Storefront and Ordering Platform

github.com/shubhamkataria2005/bhavishya_spring_backend | 2026

- Built a React storefront and Spring Boot backend for an Indian mustard-oil brand: product catalogue, orders, distributor enquiries and a JWT-secured admin dashboard with WebSocket messaging.
- Containerised the backend with Docker and deployed it to Azure App Service through Azure Container Registry and GitHub Actions; the site was later moved to Render.

CERTIFICATIONS AND TRAINING

AWS Academy Graduate — Cloud Foundations (training badge)

AWS Academy | December 2025 | credly.com/badges/138dcb38-25b3-41b9-9942-fefa6396c47a

Machine Learning A-Z: AI, Python & R + ChatGPT Prize [2025] (course certificate, 43 hours)

Udemy | November 2025 | Certificate UC-434598af-1700-443a-b661-c25bc5043b5b
